Profile

Recent Computer Science graduate with hands-on experience in full-stack .NET development. Completed a 5-month internship at IME Limited where I built and debugged core ASP.NET MVC modules. Skilled in backend development, SQL Server integration, and API design. Eager to contribute as a Dotnet Developer in fast-paced software teams.

Professional Experience

Dotnet Developer Intern, IME Limited

02/2025 – 06/2025

Panipokhari,
Kathmandu, Nepal

- Contributed to the development of modules in existing ASP.NET web applications.
- Implemented CRUD operations using ASP.NET MVC and MSSQL.
- Designed responsive and interactive web forms using ASP.NET Web Forms with server controls.
- Integrated backend functionality using ADO.NET, Entity Framework, and stored procedures.
- Debugged and resolved functional and technical issues during the testing and QA phases.

Junior Dotnet Developer, Codebee Nepal

07/2025

Kathmandu, Nepal

- Developed and maintained applications using .NET Core, ASP.NET MVC (legacy systems), Blazor, and .NET MAUI, delivering scalable and maintainable solutions.
- Implemented data access layers with Entity Framework (EF) Core ORM, including query optimization for relational databases.
- Worked across backend and frontend development, contributing to web and cross-platform applications.

Education

Computer Science and Information Technology,

2021 – 2025

National College of Computer Studies

Paknajol, Kathmandu

- Learned courses covering HTML, CSS, JS, .Net, Java, PHP, MySQL, Networking and other topics.
- Mentored and supported by teachers in projects and assignments.

Intermediate (+2), National School Of Sciences

2018 – 2021

Lainchour, Kathmandu,
Nepal

Skills

Technical Skills

- Programming Languages: C#, NodeJS, HTML, CSS, Python
- Frameworks & Technologies: ASP.NET (Web Forms & MVC), .NET Core, ADO.NET, Entity Framework, ExpressJS, Typescript
- Database Technologies: MSSQL, MySQL, Stored Procedures, MongoDB
- Tools & Platforms: Visual Studio, Git/GitHub, SQL Server Management Studio (SSMS)

Other Skills

- Debugging, Unit Testing & Troubleshooting
- Clean Code Practices
- Problem Solving
- Version control(Git & Github)
- API Testing & Integration (Postman, Swagger)

Projects

MCQ Generator, *Technologies Used: ExpressJS, NodeJS, React, Python, MySql*

Objective: To develop an intelligent MCQ Generator that automatically creates relevant and grammatically correct questions from a given context using Natural Language Processing (NLP) techniques. The system aims to assist educators, e-learning platforms, and content creators by reducing the time and effort required to manually create assessment materials.

Key Features:

- Automated Question Generation
- Distractor Option Integration
- Context Aware Output
- Quiz Mode

Blog app , *Technologies Used: React, Tailwind, .NET Web API, EF Core*

Objective: To build a full-featured blog application using React for the frontend and .NET Core for the backend, enabling users to create, manage, and interact with blog content seamlessly.

Key Features:

- User Authentication – Secure signup/login system with JWT-based authentication.
- Post Management – Create, edit, and delete blog posts with rich text support.
- Comment System – Users can engage with posts through comments.
- Responsive UI – Built with React + modern tailwind CSS for mobile and desktop compatibility.
- Database Integration – Used Entity Framework Core ORM with SQL Server for data persistence.
- Scalable Architecture – Backend powered by .NET Core Web API for clean separation of concerns.

Property Bidding System , *Technologies Used: ASP.NET Core MVC, EF Core, SQL Server*

- Developed a real-time property bidding platform with role-based access for buyers and sellers.
- Seller Role: Add properties with bidding details, including start/end time and suggested bid price.
- Buyer Role: Place bids on properties, ensuring each new bid is higher than the previous one.
- Implemented time-based restrictions to automatically stop bidding after the deadline.
- Utilized Entity Framework Core ORM with SQL Server for efficient data management and persistence.
- Built with ASP.NET  Core MVC following a clean, maintainable architecture.

Chat Application, *Technologies Used: C#, .NET Core Web API, Mongo DB, React with Typescript*

- Implemented secure user authentication and authorization with JWT and role-based access control
- real-time one-to-one messaging using SignalR, online/offline status tracking, message delivery and read receipts, conversation and message management, user profile and avatar management
- MongoDB/SQL Server database integration with optimized queries
- Secure API development, pagination for performance, comprehensive error handling and logging, and a responsive React-based user interface with real-time updates.
